Professional Summary

Enthusiastic Software Engineering student with strong foundations in Data Structures, Algorithms, and full-stack development integrated with AI. Proficient in C/C++, Python, and JavaScript, with experience building scalable applications. Strong team collaborator with clear communication skills. Familiar with SDLC, REST APIs, and Agile methodologies, currently exploring machine learning and various AI Frameworks.

Education

Vellore Institute of Technology, Chennai, Tamil Nadu BTech in Computer Science Engineering	July 2027 CGPA: 9.20
Sacred Heart Public Sr. Sec. School, Kota, Rajasthan Higher Secondary Education	March 2023 Percentage: 84%

Skills

Languages: C, C++, Java, Python, HTML, CSS, JavaScript, Solidity, SQL

Frameworks & Concepts: React.js, Node.js, Express.js, MongoDB, LangChain, LangGraph, Hardhat, Ethers.js, Scikit-learn, Machine Learning, OOPS, DSA, DBMS, Blockchain, SDLC, Debugging

Experience

Operations Lead (Previously Team Member), Artificial Intelligence Club	Mar. 2024 – Present
- Directing the Operations Department to drive efficient project management and seamless coordination. - Coordinated as an Organizing Committee member in a 24-hour offline hackathon.	
Technical Team, Game Development Club	Jul. 2024 – Jun. 2025
- Improved reusable front-end components to reduce development time for new projects. - Organized and managed offline gaming events to drive participant engagement and foster interactive experiences.	

Projects

UniStay - Platform for University Hostels (MERN)	
- Built a platform for students, wardens, and admins with booking, complaining and leave functionality. - Developed RESTful APIs, integrated an AI chatbot, and resolved backend issues to improve application reliability.	
Pintura - Decentralized File Sharing System	
- Built a blockchain storage platform with IPFS and Solidity for secure, tamper-proof file transfers. - Deployed a React.js + Ethers.js frontend that supported 50+ successful demo transfers, ensuring reliability and seamless user experience.	
Proctorly – AI-Based Online Proctoring System (MERN)	
- Developed a computer vision-based system to verify face presence and ensure the same person remains throughout the exam. - Implemented real-time face detection and identity checks to flag anomalies.	

Certifications

Blockchain Developer IBM	Jun. 17, 2025
Mastering Data Structures & Algorithms using C and C++ Udemy	Mar. 9, 2025
