Professional Summary

Computer Science Engineering student with strong foundations in Data Structures, Algorithms, and full-stack development. Proficient in C/C++, JavaScript, and Python, with hands-on work building scalable web and AI-powered applications. Skilled in REST APIs, SDLC, Agile methodologies, and modern software development practices. Focused on building practical, user-centric solutions by integrating software engineering with AI.

Education

Vellore Institute of Technology, Chennai, Tamil Nadu — CGPA: 9.20
BTech in Computer Science Engineering — July 2027

Sacred Heart Public Sr. Sec. School, Kota, Rajasthan — Percentage: 84%
Higher Secondary Education — March 2023

Skills

Languages: C, C++, Java, JavaScript, SQL, Python
Web & Backend: React.js, Node.js, Express.js, MongoDB, REST APIs
Tools & Concepts: Git, Object Oriented Programming, DSA, Computer Networks, DBMS, System Design
AI: LangChain, LangGraph, Scikit-learn, RAG, Embeddings, AI Workflow Development

Experience

Operations Lead (Previously Team Member), Artificial Intelligence Club — Mar. 2024 – Present
- Led operations for a 100+ member AI club, coordinating teams and execution across events and hackathons.
- Coordinated on-ground execution as an Organizing Committee member for a 24-hour offline hackathon.

Technical Team, Game Development Club — Jul. 2024 – Jun. 2025
- Improved reusable front-end components to reduce development time for new projects.
- Organized and managed offline gaming events to drive participant engagement and foster interactive experiences.

Projects

LeetCoach – AI-Powered Personalized Coding Tutor
- Built a Chrome extension that integrates directly with LeetCode, automatically extracting the current problem and programming language to provide context-aware tutoring without requiring manual input.
- Designed a LangChain/LangGraph-based tutoring workflow that uses questioning, progressive hints, code review, and complexity feedback to guide users toward solutions instead of directly revealing answers.
- Implemented personalized learning and progress tracking based on solved problems, hint usage, preferred language, and weak topics, allowing the tutor to adapt its guidance across coding sessions.

Proctorly – Online Proctoring System (MERN)
- Built an AI-based online examination platform that monitors candidates during exams using real-time face detection and recognition to improve remote exam integrity.
- Implemented JWT-based authentication, session tracking, and violation snapshots for secure exam monitoring.
- Developed a violation-detection system for multiple faces, head movement, tab switching, and fullscreen exits, with warning-based escalation and automatic exam submission after repeated violations.

UniStay – Platform for University Hostels (MERN)
- Built a centralized hostel management platform for students, wardens, and administrators, digitizing room allocation, complaints, leave requests, and fee-related workflows.
- Designed RESTful APIs with JWT authentication and RBAC for secure role-based access.
- Integrated an AI-powered assistant for natural-language hostel queries and automated notifications, improving access to common hostel information and reducing repetitive administrative interactions.

Certifications

Blockchain Developer - IBM — Jun. 17, 2025
Machine Learning specialization - Coursera | Stanford Online — Apr. 2, 2026
